

Phishing Awareness Training

A.Shruthi

Introduction

- Phishing is a cyberattack used to steal sensitive information.
- Attackers pretend to be trusted organizations or individuals.
- Common targets include passwords, bank details, and personal information.

Types:

- **Email Phishing**

Fraudulent emails designed to trick users.

- **Spear Phishing**

Targeted attacks aimed at specific individuals.

- **Smishing**

Phishing through SMS messages.

- **Vishing**

Phishing using voice calls.

How to Recognize Phishing Emails

- Suspicious sender addresses.
- Urgent or threatening messages.
- Spelling and grammar mistakes.
- Unexpected attachments or links.
- Requests for passwords or confidential information.

Fake Websites

Characteristics of fake websites:

- Incorrect URLs.
- Missing HTTPS security.
- Poor website design.
- Requests for sensitive information.

Always verify the website address before entering login details.

■ Social Engineering Tactics

Attackers use:

- Fear and urgency.
- Fake rewards and prizes.
- Impersonation of trusted organizations.
- Emotional manipulation.

These techniques are used to trick users into revealing sensitive information.

Prevent Phishing

- Use strong passwords.
- Enable two-factor authentication.
- Avoid clicking unknown links.
- Keep software updated.
- Verify sender identities.
- Use antivirus software.

Real-World Example

Example:

- An attacker sends an email pretending to be from a bank and asks users to verify account information.
- Victims click the provided link and enter their credentials on a fake website.
- The attacker then steals their usernames and passwords.

Interactive Quiz

What should you check before clicking a link?
