

Investment Portfolio Creation

Objective

To create a diversified investment portfolio worth ₹1,00,000 by allocating funds among stocks, ETFs, and cryptocurrencies.

Portfolio Allocation

Asset Type	Investment	Percentage
Stocks	₹60,000	60%
ETFs	₹25,000	25%
Cryptocurrency	₹15,000	15%

Stocks (₹60,000)

- Reliance Industries – ₹20,000
- TCS – ₹20,000
- Infosys – ₹20,000

ETFs (₹25,000)

- Nippon India ETF Nifty 50 – ₹15,000
- Motilal Oswal NASDAQ 100 ETF – ₹10,000

Cryptocurrency (₹15,000)

- Bitcoin (BTC) – ₹10,000
- Ethereum (ETH) – ₹5,000

Rationale

Stocks

Provide long-term capital appreciation and stable returns.

ETFs

Offer diversification and reduce investment risk.

Cryptocurrencies

Provide high-growth opportunities but involve higher risk.

Expected Benefits

- Diversification across asset classes.
- Balanced risk and return.
- Exposure to both Indian and global markets.

Conclusion

This portfolio aims to achieve moderate growth while maintaining manageable risk. Diversification across stocks, ETFs, and cryptocurrencies improves overall portfolio stability and provides opportunities for long-term wealth creation.
